                                                                                                                   οy
                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                    The present sequence encodes human activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic, and can the activities, and can be used in anti-HIV and cantianaemic, antiasthmatic, ophthalmological, anti-HIV and cantianaemic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polymoutcotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IBA) deficiency disease, IBA nephritis, gamma-globulinaemia, atopic dermatitis, allergic collitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen collitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen disease, bideorge disease, ataxia telangiectasia, common variable in mennodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated teleciency disease, AIDS (auto immunodeficiency procenne), elevated the disorder, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID every.

Activation-induced cytidine deaminase; AID; cytidine deaminase; antialergic; antianement antiasthmatic; ophthalmological; anti-HIV; dermatological; antianement; antiasthmatic; ophthalmological; anti-HIV; dermatological; gene therapy; B cell associated immune system disorder; food allergy; immunodeficiency disease; immunoglobulin A deficiency disease; asthma; IgA nephritis; gamma-globulinaemia; atopic dermatitis; allergic colitis; drug allergy; allergic rhinitis; Rosen disease; DiGeorge disease; AIDS; ataxia telangiectasia; common variable immunodeficiency disorder; major histocompatibility class II deficiency disease; auto immunodeficiency syndrome; IgG subclass selection disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes mouse activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic, antiantement, antiantement, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, allergic colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen
Mouse activation-induced cytidine deaminase encoding cDNA SEQ ID NO:1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid encoding activation induced cytidine deaminase, useful a target for drug development for immune-related diseases including

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            214
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    394
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes an activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic, antiasthmatic, ophthalmological, anti-HIV and dermacological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immethods for identifying drugs for the diseases and allergies, such as immunoglobulin A (IGA) deficiency disease. IgA nephritis, gamma-globulinemia, atopic dermatitis, allergic colitis, asthma, food allergy, drug allergy, allergy chintis, Rosen fununodeficiency disease, biceorge disease, ataxia telangiectasia, common variable immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated IGE disorder, and IGG subclass selection disorder. The present invention describes an activation-induced cytidine deaminase has cytidine activity similar to APOBEC-1. AID has antiallergic. The present cytidine activity similar to APOBEC-1. AID has antiallergic, antianeamic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency colitis, asthma, food allergy, drug allergy, allergic disease, Digeorge disease, ataxia telangiectasia, common variable immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated IT deficiency disease, AIDS (auto immunodeficiency syndrome), elevated contains and lgG subclass selection disconder.
                                                                                                                                                              Activation-induced cytidine deaminase; AID; cytidine deaminase; aminane related disease; allergy; allergic disease; antiallergic; antianaemic; antiasthmatic; ophthalmological; anti-HIV; dermatological; gene therapy; B cell associated immune system disorder; food allergy; immunodeficiency disease; immunoglobulin A deficiency disease; asthma; farma qlobulinaemia; atopic dermatitis; allergic colitis; drug allergy; allergic rhinitis; Rosen disease; DiGeorge disease; atoxia telangiectasia; common variable immunodeficiency disorder; major histocompatibility class II deficiency disease; albs; auto immunodeficiency syndrome; IgG subclass selection disorder; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders. The present sequence represents a genomic DNA sequence of human AID.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid encoding activation induced cytidine deaminase, useful as a target for drug development for immune-related diseases including allergies .
                                                                                                                            Human activation-induced cytidine deaminase genomic DNA SEQ ID NO:35.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 11204 BP; 3305 A; 2273 C; 2373 G; 3253 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes an activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID tolynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency disease. disease, DiGeorge disease, ataxia telangiectasia, common variable immunodeficiency disorder. MHC (major histocompatibility class) class II deficiency disease, AIDS (auto immunodeficiency syndrome), elevated IGE disorder, and IGG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders. The present sequence represents the exon 3 genomic DNA sequence of human AID.

                                                                                                                                                                                                                 (AID). AID structurally relates to an RNA editing enzyme APOBEC and has cytidine activity similar to APOBEC-1. AID has antiallergic, antianeanic, antiasthmatic, ophthalmological, anti-HIV and dermacological activities, and can be used in gene therapy. AID polymucleotides are useful in methods for identifying drugs for the treatment of B cell associated immunos system disorders, immunodeficiency diseases and allergies, such as immunogloulin A (IgA) deficiency disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, allergic colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen disease, DiGeorge disease, ataxia telangiectasia, common variable immunodeficiency disease, AIDS (auto immunodeficiency syndrome), elevated IgE disorder, and IgG subclass selection disorder. The DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders. The present sequence represents the exon 2 genomic DNA sequence of human AID.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         89

This is the polynucleotide sequence of the clone 1p547_4, which was isolated from a human fetal brain cDNA library using methods which are solated from a human fetal brain cDNA library using methods which are solective for cDNAs encoding secreted protein.

The public sequence of the encoded protein.

The PNS and proteins of the invention are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, hemostatic for manue stimulating (e.g. as vaccines) or suppressing activity, hemostatic cativity, cytokine and cell proliferation/differentiation activity, chemotratic/chemokinetic activity, activity, chemotratic/chemokinetic activity, and tumor activity, receptor/ligand activity, and tumor cativity, receptor/ligand activity, and tumor continuity and solar stated to be useful for generation of bacteria, fundy, viruses and other parasites; effecting continuity continuities activity in the sinclude inhibiting the growth, infection or function of bacteria, fundy, viruses and other parasites; effecting condity characteristics such as, e.g. weight, color, skin, etc. color, skin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            991 TCTA-----TGATGATCAAGGAAGATGTCAGGAGGGGCTGCGCACCCTGGCCGAGGCTG 1044

The invention relates to novel human secreted proteins, the nucleic acids encoding them. The protein may exhibit cytokine, cell proliferation or cell differentiation activity or may induce production of other or cell differentiation activity which is useful for the treatment of cytokines in certain cell populations and may exhibit immune stimulating or immunodeficiencies and disorders e.g. severe combined immune deficiencies and disorders e.g. severe combined immunodeficiency (SCID), autoimmune disorders e.g. sultiple actiencis.

Cytokines immune deficiencies and disorders e.g. severe combined immuned for immunodeficiency (SCID), autoimmune disorders actierosis.

Cytokines including are also useful in the treatment of diseases and disorders including tissue, skin and organ transplantation and in graft-versus-host diseases (GVHD), in the induction of tumour immunity, myeloid or lymphoid cell deficiencies, wound healing and tissue repair, in the treatment of burns, incisions and ulcers; as well as in treatment of print and seases, osteoporosis or osteoartritis, mediated by inflammatory processes, diseases, infammatory processes, diseases, diseases, succeptible and seases, infammatory bowel disease, ulcers, bone regeneration. The protein, having activin- or inhibin-related activities is useful as a
                                                                                                                                                                                                                 Human; secreted protein; ss; antiinflammatory; immunosuppressive; nootropic; neuroprotective; antiarthritic; antimicrobial; vulnerary; cytostatic; antidabetic; virucide; antiinfertility; anticonvulsant; vasotropic; antiparkinsonian; immunostimulant; dermatological; antirheumatic; antitumor; antiulcer; osteopathic; tranquiliser; cerebroprotective; cytokine; cell proliferation; cell differentiation; immune deficiency; severe combined immunodeficiency; SCID; tumour; autoimmune disorder; multiple sclerosis; rheumatoid arthritis; graft-versus-host disease; myeloid deficiency; wound healing; ulcer; periodontal disease; Huntington's disease; infection; cardiac disease; stroke; sepsis; inflammatory bowel disease; contraceptive; immunogen;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Secreted human proteins, useful as vaccine for treating various diseases such as autoimmune disorders (e.g. multiple sclerosis), and nervous system disorders (e.g. stroke)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Evans C;
Wong GG;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           McCoy JM, Lavallie E, Collins-racie LA,

The invention relates to isolated polynucleotides (ABA90876-ABA90968 and ABA90980) and encoded proteins (ABB55698-ABB55800), especially polynucleotides SEO ID NO 1 (ABA90876) and SEO ID NO 1 (ABA90876) and SEO ID NO 20 (ABB55707) contained in clones bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 are deposited with the American Type Culture Collection (ATCC) with accession number 98599. The polynucleotides and encoded polypeptides have evicatic, anti-inflammatory, immunomodulator, vulnerary, neuroprotective, activin, inhibin, chemotactic, hAemostatic, thrombolytic and anti-inflammatory activity and acting as cytokine modulators, haematopolesis regulators, tissue growth modulators and/or cadherin suppressors. The polypeptides and polynucleotides are useful in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             217
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             870

The present sequence encodes a human RNA-associated protein. The expression of RNA-associated proteins is closely associated with reproductive tissues, nervous tissues, call proliferation including cancer, inflammation and immune responses, and so they may be used for diagnosis, treatment or prevention of cell proliferative, and disorders which may be treated include actinic keratosis, and disorders which may be treated include actinic keratosis, atteriosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease, myelofibrosis, paroxysomal nocturnal hemoglobinuria, polycythermia vera, psoriasis, primary thrombocythemia

The human RNA editing enzyme (REE) is used in a pharmaceutical carrier disorther treatment of cancer, viral diseases and circulatory system disorders. The enzyme issued in vivo for the correct processing of RNA transcripts of genes e.g. change of a codon in apolipoprotein B (apoB) RNA to give a 100 and 48 kDa product transcribed from the same gene. Certain disorders have been linked to incorrect RNA editing, e.g. failure of apo B editing leads to excessive apoB 100 production and hypercholesterolaemia. Other disorders thought to be linked to incorrect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hypercholesterolaemia. Other disorders unought to the consisting in RNA processing include aberrant alpha-galactosidase processing in RNA processing include aberrant alpha-galactosidase processing in Fabry's disease and neurofibromatosis type I. The enzyme can be produce Fabry's disease and neurofibromatosis type I. The enzyme can be produced in the fabry of the fabry of the fabra of the fabry of the fabry of the fabry of the fabry of the fabra of the fabry of the fabr

RMEP DNA is useful in drug screening techniques, gene therapy and for creating transgenic animals. The present sequence is human RMEP-19 cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human RNA metabolism proteins (RMEP) and their corresponding cDNA molecules. RMEP and its DNA are used for diagnosing, treating and preventing nervous system disorders (epilepsy, dementia, stroke, Alzheimer's disease, Huntington's disease, Parkinson's disease); prion diseases; fatal familial insomnia, nutritional and metabolic diseases of the nervous system; inherited, metabolic, endocrine and toxic myopathy; mental disorders (mood, anxiety, schizophrenic disorders) amnesia and Tourste's disorder; autoimmune/inflammatory disorders (AIDS-

This sequence represents the CDNA encoding human RNA editing enzyme
REE-2. CDNA encoding REE-2 was initially isolated in a prostate tumour
CC CDNA library, with the present sequence representing a conseasors. REE-2
has chemical and structural homology with the human apoB mRNA editing
crack schemical and structural homology with the human apoB mRNA editing
crack and a portion of the mRNA editing enzyme photobolin I (43% identity).
CC and a portion of which were defined from tumours, neuronal tissues, immune
CC system cells or synovial tissue from atthritis patients. REE-2 is
therefore thought to be associated with the development of cancer,
CC autoimmune disorders, circulatory system disorders (e.g.
CC hypercholesterolamia), viral infections and neurological diseases (e.g.
CN percholesterolamia), viral infections and neurological diseases (e.g.
C hypertholesterolamia), viral infections and neurological diseases (e.g.
C diagnosis, treatment and prevention of such diseases via the modulation
CC (e.g., an alteration in protein activity). The invention specifically
CC (e.g., an alteration in protein activity). The invention specifically
CC biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the cDNA and genomic sequences polypeptides (aAU22915-AAU23814), and the cDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, including hyperpoliferative disorders (e.g. cancer), carchivascular disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. athma), cardiovascular disorders (e.g. athmanatory disorders (e.g. asthma), cardiovascular disorders (e.g. athmanatory disorders (e.g. infertility) and infectious disorders (e.g. infiluenca). The polynucleotides of the invention can also be used in gene therapy. AAS40785-AAS1684 represent cDNA sequences encoding for the novel human enzyme polypeptides of the invention. can also be used in gene therapy. Carguence data for this patent did not form part of the printed Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GAGACCTACCTGTGCTACGTAGTGAAGAGGCGTGACAGTGCTACATCCTTTTCACTGGAC 135

protein, called prostate cancer antigens, given in ABB56363 to AAB57302. The prostate cancer antigens, given in ABB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antilnfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome polynucleotides may be used for detection of prostate cancer, remosome cidentification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; prostate cancer; prostate cancer antigen; detection; diagnosis; neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular; vulnerary; gastrointestinal; nephrotropic; antilnfective; gynaecological; antibacterial; gene therapy; neural; immune; reproductive; renal; gastrointestinal; pulmonary; cardiovascular; proliferative disorder; wound; infectious disease; ss.
